June 2023

- Relevant Complete Courses: Data Structure, OOP, IOT, Mathematical Modeling, Computational Thinking,

PROJECTS

Peripheral Loans 2.0 – IBM

Guadalajara

Full stack developer

Feb 2022 – Jun 2022

- I worked with node Js in backend, we used different libraries like JWT to generate tokens for each user or crypto-js to encrypt the password and email of users, additionally I connected the database to our backend with its API service.
- User detection. I worked on the Database creating tables and verifying the functionality with postman, I also did a user detection to identify which user is Logging in.
- I used docker to deploy our application along with the GitHub service, GitHub actions to automate the deployment process.

Personal Portfolio – Personal Project

Guadalajara

Front-end Web Developer

Dec 2021 – Jan 2022

- I worked on the design of the web page of all the elements and components of it, we use a node package called node mailer for sending mails for contact.
- The final website is a portfolio with personal information about me, my work, projects, work experience and a contact form.

Mobile App - Banco de Alimentos de Guadalajara

Guadalajara

Android Developer

Aug 2021 – Oct 2021

- Worked in the User Interface of a mobile app with the objective of solving the given problem of the association, interpreting them to develop a solution for them.
- The final product consists in a tool for the public in general who wanted to help the association giving them the opportunity of donating via the app, or no knowing where to drop of the donations

ATS – Amdocs

Guadalajara

Front-end Web Developer

Apr 2021 – Jun 2021

- Worked alongside a company trying to resolve one of the main problems, designing the front-end of a web app that organize the talent acquisition.
- They gave us the problem and we decided on creating a hiring tracking tool with different roles, so they could manage better the hiring prospects.
